WEB BASED COMMUNICATION OF INFORMATIONWITH RECONFIGURABLE FORMAT

Abstract of Disclosure

A number of different aspects that can be carried out on an Internet site and prestored sequences of actions or scripts. The scripts can be formed by monitoring the actions of a user and storing their actions in a memory. That sequence of keystrokes can later be used to access the same web site and obtain updated information. For example, this may be used to obtain bank balances, ongoing actions such as bidding systems, stocks, and the lighting. Different ways of forming the "script" that executes this information are described. In one aspect, the script validates an encryption sequence and lights and indicator on who the handheld computer indicating that the encryption has been validating. In another aspect, the handheld provides information from effectively an electronic Yellow Pages.
